

KITAGAWA INDUSTRIES CO., LTD.

EMC Solution Services

You cannot meet EMC standards

When you installed your equipment, surrounding machines did not work properly.

You don't have any one to consult with...

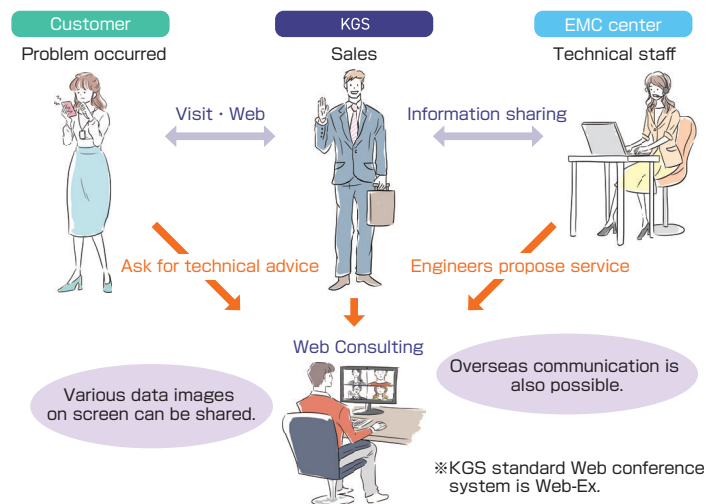

We will help you to find solutions to noise problems.

1 **EMC Solution Service** WEB EMC Management Consulting

We can help you with pre-measurements for EMC certification, find solutions to your machine's malfunctioning and find ways to reduce costs of EMC components; simply over a WEB conference.

Through the Internet, customers (in conference rooms, offices, measurement rooms etc.) can communicate with our engineers in the EMC center and receive our consulting service. We are prompt in serving customers for noise management and the service is available both in Japan and over seas.

As needed, our engineers can visit an EMC test lab in your office or in other close site and check your machine/device. They can also provide noise management to your machine on site.

2 **EMC Solution Service** Proposal of WEB Seminar

"I'm too busy to leave the office." , "Sharing information is complex since all members in the department hardly attend WEB seminars." , if only there was a seminar/exhibition to give us hints about solutions to our problem when many of us can join...." , etc. For people working in design and R&D departments and who face such challenges, we are more than happy to hold a WEB seminar.

3

EMC Solution Service On-demand EMC Management Support in JAPAN

EMC management support service offers outsourced EMC testing—no customer attendance required. Before and while testing, you can talk to our test engineer and discuss and decide details such as test conditions, how to operate your device and management method etc. using the Web conference system.

We, as a VLAC accredited laboratory, supply reliable test reports.

Various EMC tests are conducted to confirm device noise level, and propose suitable noise suppression methods/components etc.

● Major equipment categories

Automobiles
